Scaffolding

Footprint, the scaffolding software that makes sense.

Background

Footprint is a flexible solution that helps manage and monitor mobile workers delivering services in the field.

Footprint gives companies the ability to meet the challenges of replacing manual, paper-based processes for managing mobile workers.

With ease of use at the forefront, Footprint provides the tools needed to digitise your field-based paperwork and improve onsite operational efficiency.

Footprint is one of the most highly configurable solutions on the market, so will be adapted to suit your specific business needs.

The mobile app is a turnkey solution and there is no time lag required for development. Whether the plan is for a gradual and organic deployment, or something faster and more wide ranging, Footprint adapts to the needs of the project.

Key Business Features

Simple & easy to use

Ensure key information is captured with mandatory fields

Live view of all scaffolds

Geo-tagged & timestamped information

Instant sign off on additional works and design changes

Manage harness/lanyard/ PPE allocation

Speed up completion of documents

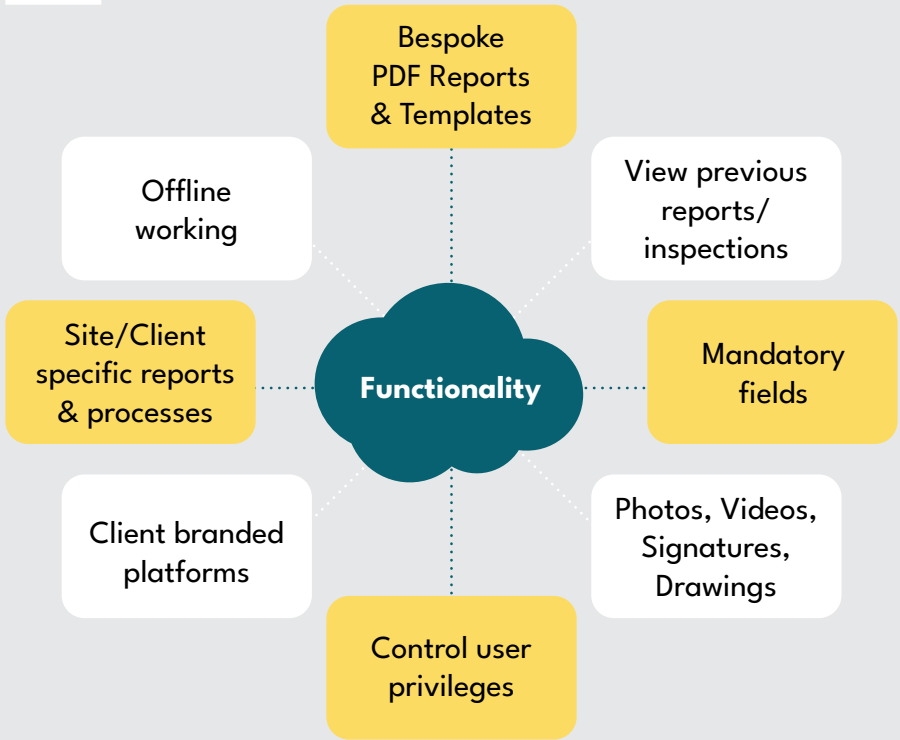

Tailor all paperwork and workflows to customer requirements

Automatically email completed paperwork to customers on-site

Features

Rules Engine

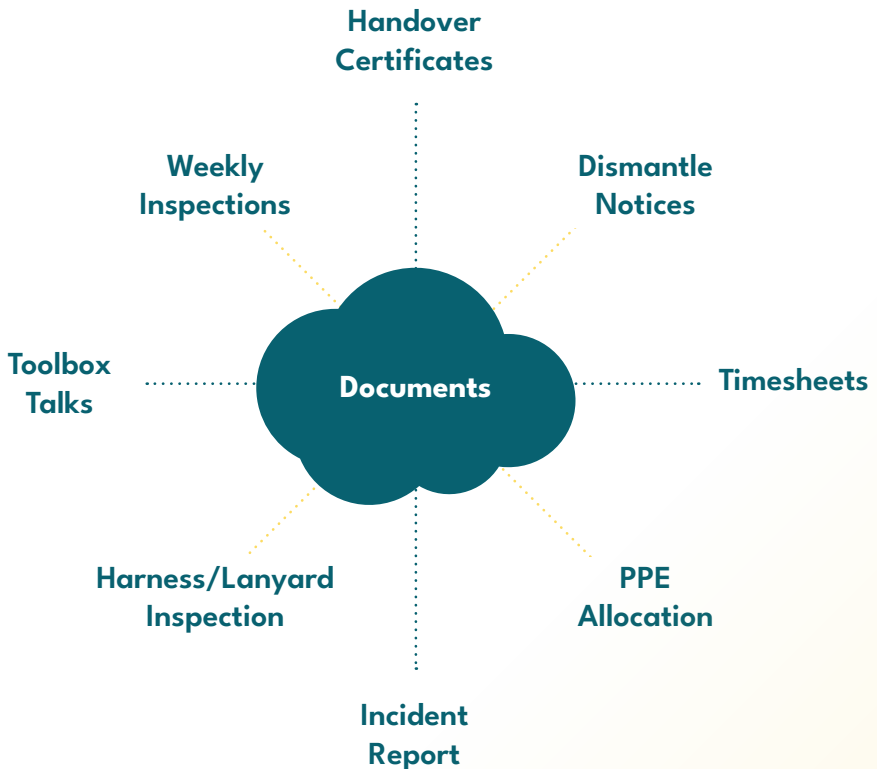

Some of the frequently used rules within scaffolding:

- Create & send recurring forms/jobs/tasks
- Allocate forms/tasks to other users- reallocate work to supervisors to sign-off
- Send notifications
 - Completion of jobs
 - /incidents/requests
- Integrate with other systems within your business (CRM/Accounts, etc)
- Extract data to our analytics module
- And much more

Form Builder

Footprint is a customisable solutions which gives you the toolset to capture live information from your field based teams.

Footprint allows you to create and amend your own forms as your business and industry requirements change through our custom form builder. Select from over 50 different field types, text, pictures, signatures, videos ... and much more. All information is geotagged, ensuring full compliance and accountability.

Grouping key business information

Example: Health and Safety

- **Time/ Location stamps** - Tags/Incidents/Tampers
- **Real time information** - Instant incident reporting
- **Notifications** - Keep track of failed PPE (harness/lanyards/etc)
- **Toolbox talk record** - Keep records of attendance and topic covered
- **Automated rules** - Conditioned based input to ensure compliance
- **Mandatory fields** - Ensuring key information is gathered
- **KPI dashboards** - Monitor key indicators

Live Dashboard Module

- Customisable dashboards
- Gain real-time visibility of your live scaffolds and ongoing work at specific sites
- Track when inspections are completed and what the outcomes are
- Monitor locations/client sites
- Monitor work variations carried out on site
- Health and safety – live view of incidents/locations/ what happened/outcomes
- Vehicle and Plant checks – types of defect/person responsible
- Toolbox talks and PPE Allocation – monitor frequency and compliance
- Timesheets - Track employee's time through check in/out
- Client or Contract Dashboards – Specific to your client requirements monitoring live data

The Process

All of our workflows/templates/documents are built to specification from the customer. Footprint provide training to each customer to amend & build their own reports and mobile templates.

Example Workflow

- Job created in office or on-site by supervisor
- Details automatically populated on device
- Job issued to team and is completed via Footprint App
- Photos taken, sign offs filled in, additional works noted
- Document is completed. This can be re-allocated to be checked over or create document and send directly to customer
